

## Microblading After Care

Please follow these instructions for up to 14 days after the procedure to improve and prolong the results of Everlasting Brows.

- No makeup should be applied directly on the brows during the healing process.
- Avoid wetting eyebrows during the healing process (if you find it difficult to avoid getting wet when showering, try taking a bath instead).
- Avoid sauna/steam rooms and sun beds during the healing process.
- **Do not touch, rub, pick or scratch** your brows following treatment or during healing process.
- You may find that your eyebrows will scab or become slightly dry following the treatment. If they itch, **DO NO SCRATCH** them. Just tap them to alleviate the itch.
- If your eyebrows get wet during the healing process, pat them dry with a towel, **DO NOT RUB.**
- Apply your healing balm according to your therapist's advice. If you have excessively oily skin, you may not need to use healing balm at all. For those with dry skin, balm can be used up to 3 times a day.
- Client can use Q-tip and soap and water to gently remove a previous layer of balm or to cleanse the eyebrows.
- A "touch up" session is usually needed 6 weeks after the procedure; please make sure you schedule this with your therapist.
- Avoid excess sun exposure as this can cause the pigment to fade and can affect the healing process.
- Avoid using daily skincare products directly on the eyebrows.
- If you are having an MRI scan, please inform your doctor that you have had microblading/semi permanent makeup done.
- If you are planning a chemical peel, or any other medical procedure, please inform therapist of the procedure you have had. Procedure should only be done once the healing process is complete.
- If you are due to give blood after the procedure, please inform your nurse about the microblading treatment you have had as this might alter the results.
